## Product

### Characteristics

Our microfibres are able to retain up to seven times their own weight in water, making them highly effective for drying your bike after a rinse. During manufacture, the fibres are also split to easily remove any residual dirt. This design also produces a soft microfibre that won't scratch paintwork.

Not just for absorbing water: Our Microfibres can also be used in combination with Fast Clean, Brake Cleaner and Degrease. They will capture the dirt dissolved by these products and leave a clean, dry surface.

Bike7 Microfibre for the finishing touch:

Wiping your bike with our microfibre after cleaning it with Fast Wipes will make it look like new.

With Bike7 Protect. Use 2 clean microfibres to cover your brake discs before spraying Bike7 Protect on your bike. Then use them to wipe down your bike and

give the paintwork a new look.

Remember to machine wash your microfibres regularly to remove the dirt inside the fibres. You can also wash them in a bucket of hot water with a little Bike7 Clean before rinsing well.

## Use
